1) Translate this text.

Nowadays it is impossible to imagine our lives without some kind of equipment. It can be something very simple such as a spade that you use to dig soil, or it can be a very complicated electronic equipment such as telescopes or navigation systems of planes and ships. Today we will talk about one of the most interesting pieces of equipment that helps us to see what happens in the depth of space. This unique piece of equipment is called the Hubble space telescope. It makes one orbit around the Earth every 95 minutes. The telescope was launched by NASA in 1990. This telescope is very big. It has the size of a school bus. The Hubble space telescope takes pictures of planets and galaxies that are far away from the Earth.
